

PLENARY SESSION 1

IMPLEMENTATION CHALLENGES AND INNOVATIVE SOLUTIONS FOR UHC 2030

| BACKGROUND

Underlying the achievement of most SDG3 targets is universal access to and uptake of quality, affordable health services (SDG target 3.8), the large majority delivered close to where people live and work (i.e. primary care).

WHO estimates that around half of the world's population lack access to essential health services worldwide. Even when essential services are accessible, they are often fragmented, of poor quality and safety, and do not always address the upstream determinants of health and equity in health.

At the same time, the burden of noncommunicable diseases, accidents and mental health problems is growing. Ageing populations are causing people to live longer, but often with multiple diseases and conditions that require complex care over time. With the growth of social media and digital communication, healthcare users and their families are much more informed (or mis-informed) and are demanding more say in how health services take care of them. Significant rise in medical consumerism, malpractice litigation, and lack of trust in vaccination campaigns are observed. In more fragile contexts, the lack of confidence in health services and has hampered efforts to control communicable disease threats. This shows that communities are the anchor of nations' resilience-building efforts. In this context, increased accountability (including social accountability to local communities) and broader stakeholder participation is needed.

The key to dealing with today's public health challenges and changing landscape is not to change strategic direction – primary health care remains the cornerstone of a sustainable health system and is the foundation for essential part of achieving universal health coverage– but to transform the way health and social services are organized, funded and delivered. For health care and coverage to be truly universal, it calls a shift from health systems designed around diseases and health institutions towards systems designed for people, with people. This is required to meet the evolving needs of the population, ensure population trust in services and subsequently their effective use, and to curb inefficiencies related to duplication and waste. In the wider context of Sustainable Development Goals, health workers are also expected to demonstrate their social responsibility: protecting the general public's well-being and meeting social expectations, while also aiming to reduce the impact on the environment of their activities.

| OBJECTIVES

Political commitment to achieving UHC is strongly affirmed at the global level as the world convened in Astana in 2018 to reiterate their commitment to PHC; and the 2019 United Nations General Assembly United Nations prepares to hold a High-Level Meeting on “Universal Health Coverage: Moving Together to Build a Healthier World”. In this context, this session aims at building on the global commitments and experiences learned from pioneering countries to go one step further and identify innovative solutions to make significant progress in implementation for local communities, ensuring no one is left behind. This session adopts whole-of-system approach to achieving UHC and considers both the supply and demand side interventions. It highlights the political economy of reforms through countries' stories to transform its health system and calls on to concrete innovative actions to achieve demonstrable results in short time frame (panel session).

Speaker / Panelist

Erica Di Ruggiero

Director, Global Health & Associate Professor

Dalla Lana School of Public Health, University of Toronto
Canada

Erica Di Ruggiero is Associate Professor, Social and Behavioural Health Sciences Division, Director of Global Health, and Director, Collaborative Specialization in Global Health at the Dalla Lana School of Public Health. Di Ruggiero is a global public health expert and opinion leader whose research focuses on the study of population health interventions (e.g. policies and health promotion programs) to address health and health inequities, including global labour policy and non-communicable disease prevention programs, as well as how different types of evidence shape global policy agendas and influence global governance in the context of the Sustainable Development Goals. She is the editor in chief for Global Health Promotion. She holds a PhD in Public Health Sciences from the Dalla Lana School of Public Health, and is a registered dietitian. Previously, Di Ruggiero was Deputy Scientific Director of the Canadian Institutes of Health Research's Institute of Population and Public Health where she led the development, implementation and evaluation of strategic research, capacity building and knowledge translation initiatives to address different research priorities including health equity, global health, maternal and child health, environmental health and population health intervention research. She was a past chair of the Canadian Public Health Association Board of Directors and past honorary vice-chair of the American Public Health Association.
